AI AGENTS

Learn how there are being used in the real world

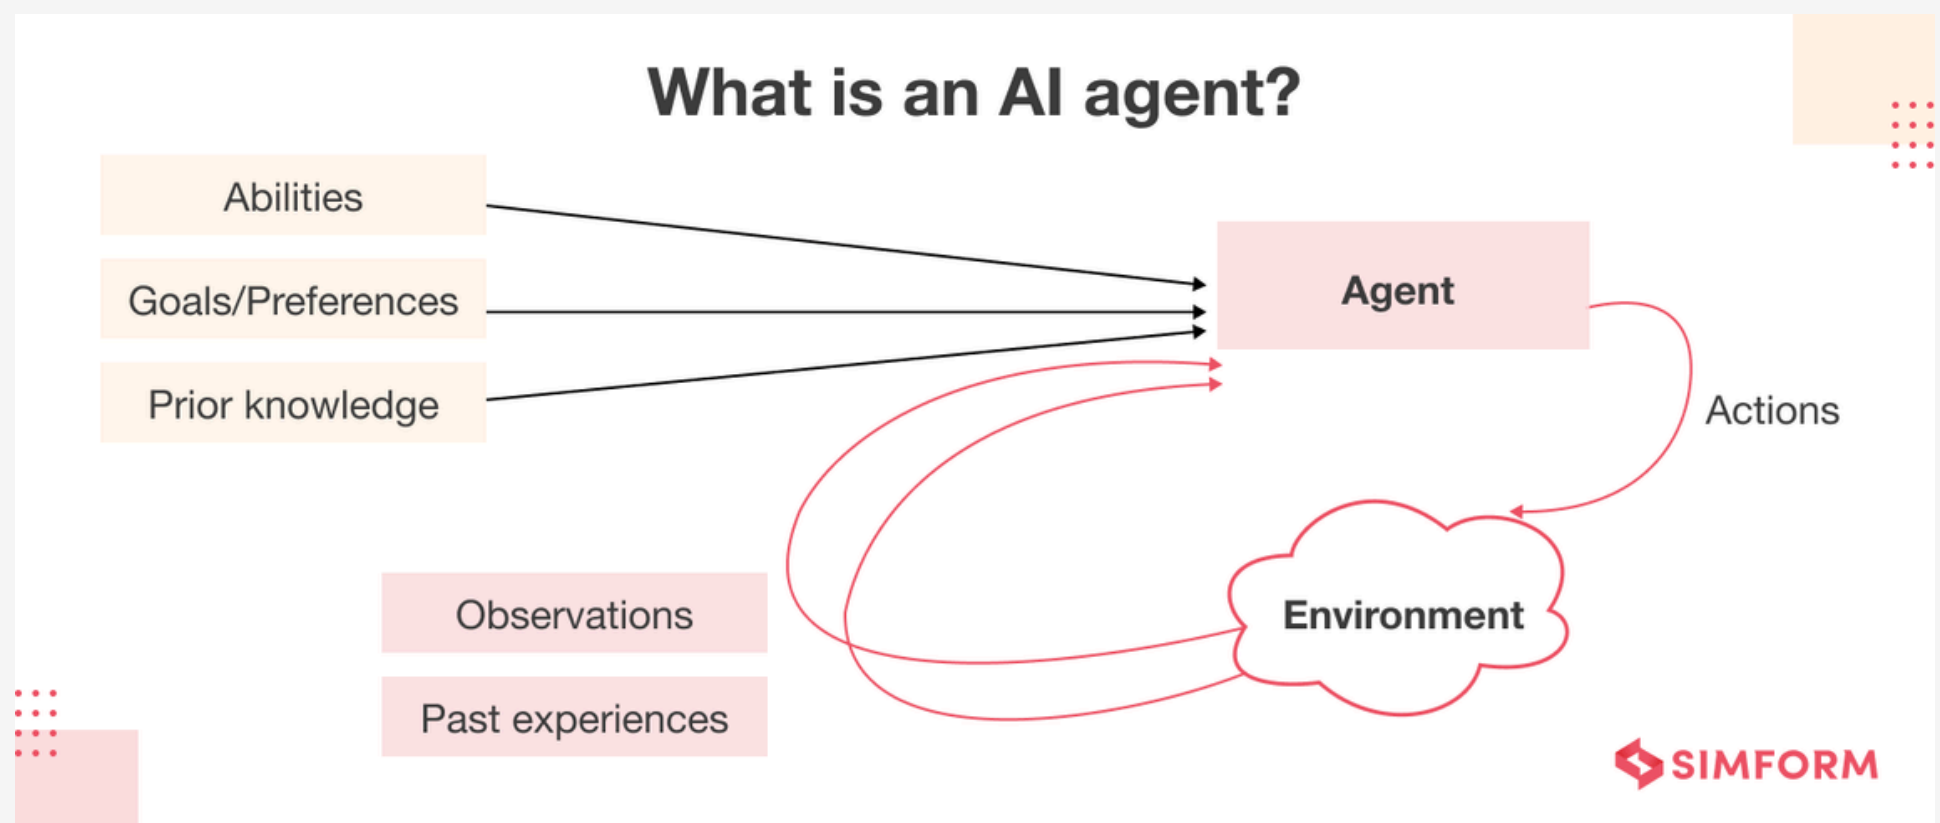

Introduction

The AI agent industry hit **\$5.4 billion** in 2024 (GrandViewResearch).

Klarna's AI agent is doing the work of **700 employees** all on its own.

So, What Exactly Is an AI Agent?

An AI agent is a smart system that can think, decide, and act on its own to complete tasks, just like a digital assistant. It analyzes information, makes choices, and uses tools to get things done—without needing constant human input.

From coding to finance, education to architecture, AI agents are everywhere.

In this post you will get to know the top AI agents in the industry that are helping businesses grow.

1. Manus AI

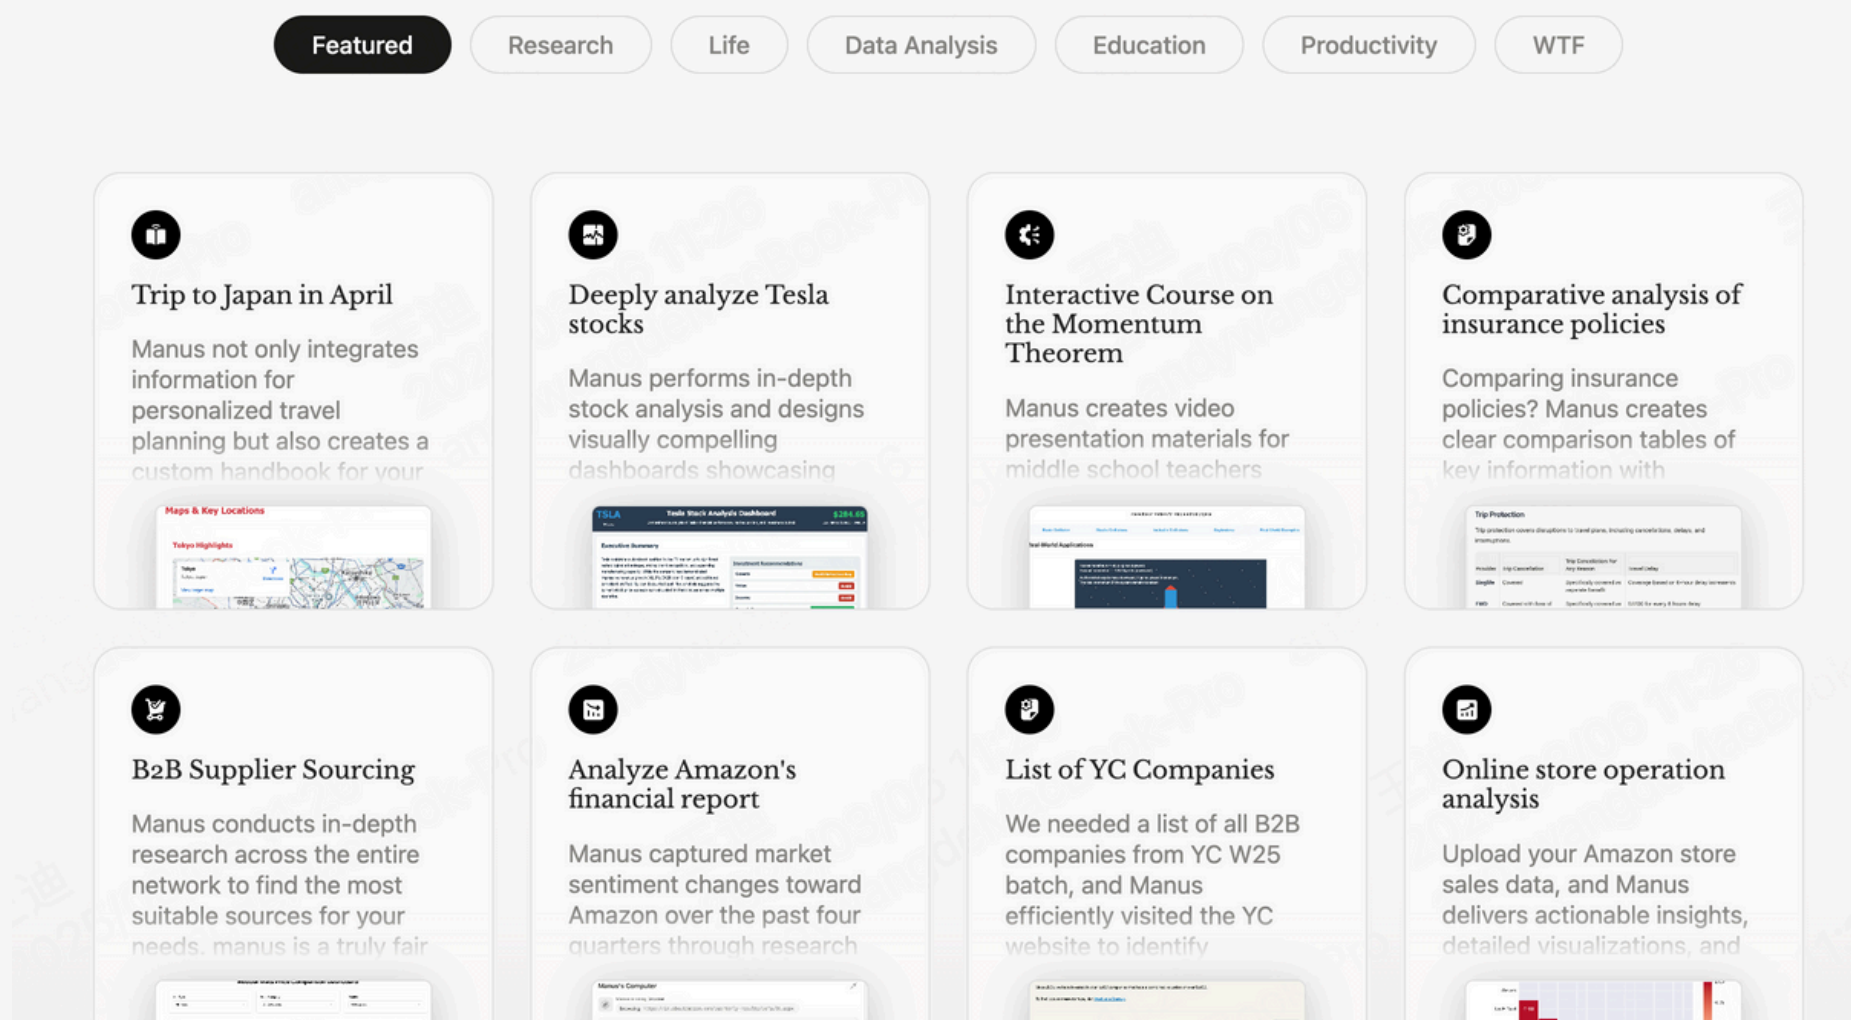

Manus AI is an advanced AI agent designed for autonomous task execution, outperforming traditional assistants with LLMs, multi-modal processing, and tool integration.

Key Features:

- ✓ Task Automation – Handles reports, data analysis, content creation, and more.
- ✓ Multi-Modal AI – Processes text, images, and code.
- ✓ Tool Integration – Connects with web browsers, databases, and editors.
- ✓ Adaptive Learning – Optimizes responses over time.

Use case gallery

Learn how Manus handles real-world tasks through step-by-step replays.

GAIA Benchmark Leader

🏆 Outperforms GPT-4, AutoGPT, and h2oGPTe, achieving state-of-the-art results in reasoning, multi-modal processing, and automation.

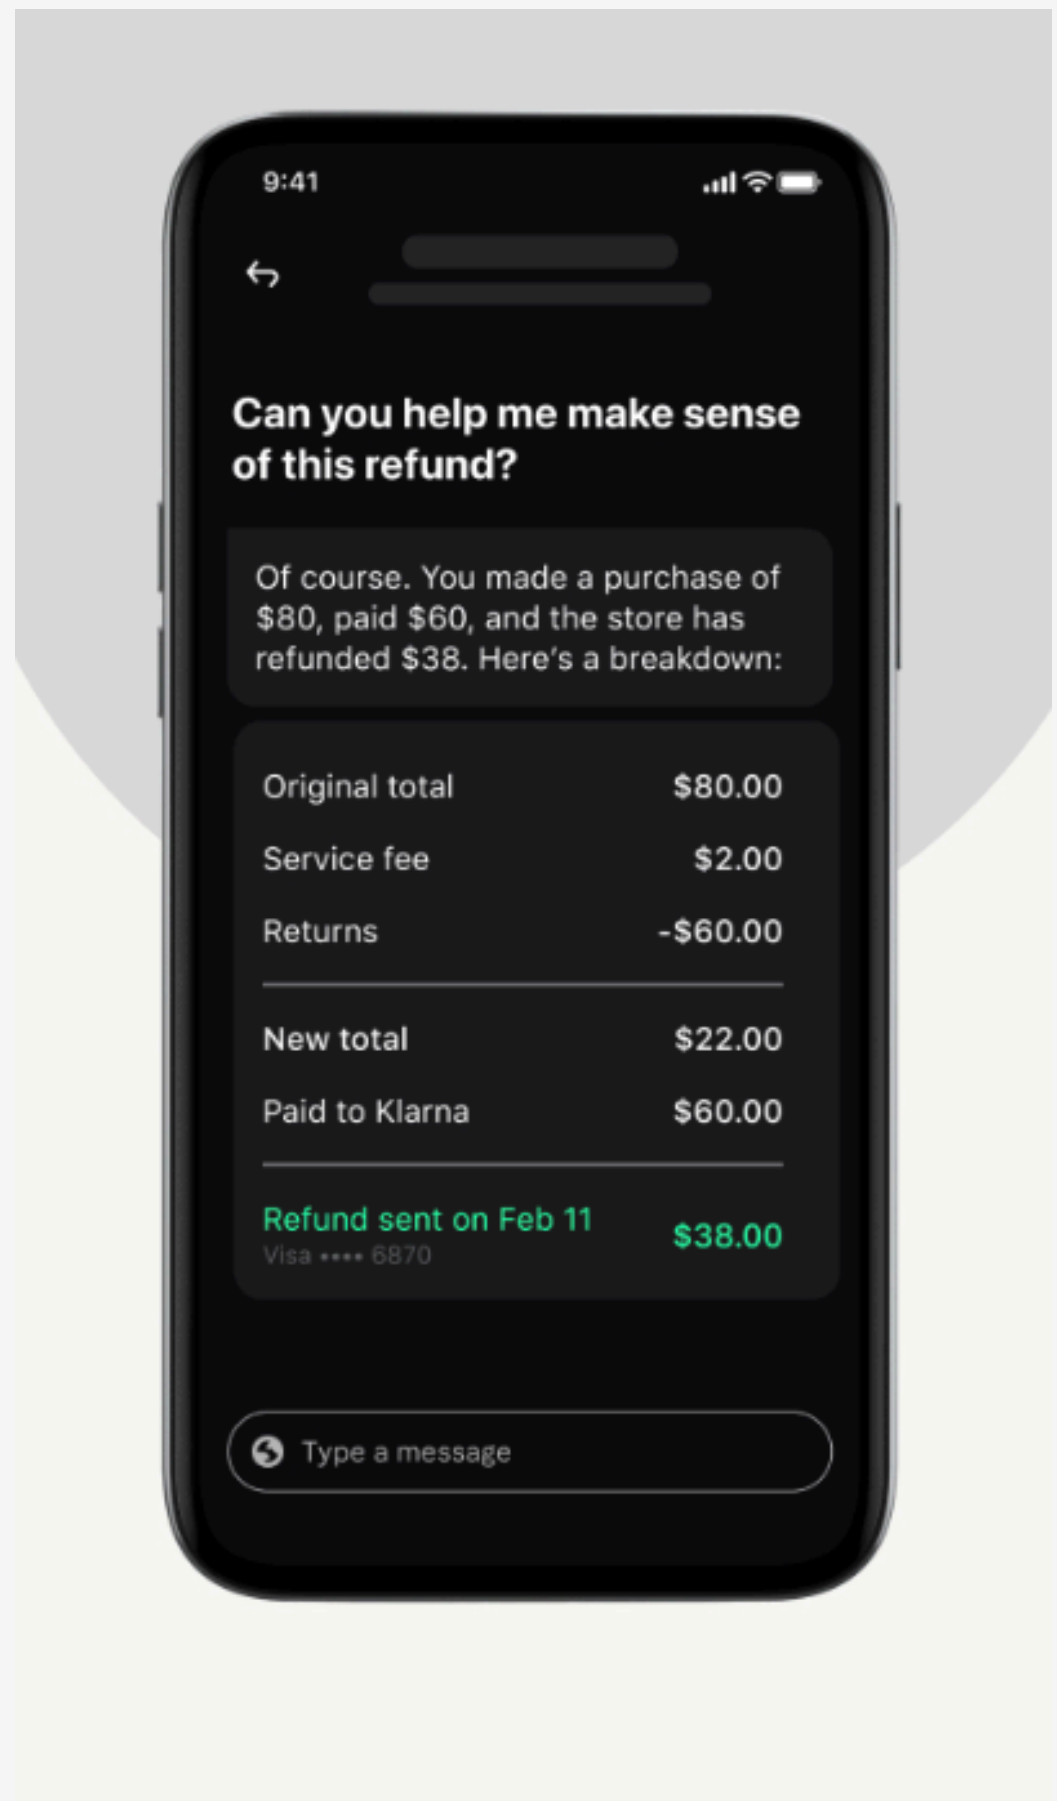

2. Klarna

Klarna built an advanced AI assistant using LangGraph and LangSmith. This system:

- ✓ Route customer queries
- ✓ Provides context-aware responses
- ✓ Use test-driven development for behavior analysis and prompt optimization.

The Impact:

- ◆ 80% faster customer query resolution.
- ◆ 70% of repetitive tasks automated, freeing human agents for complex cases.
- ◆ Improved accuracy, reducing unnecessary escalations.

3. Google's Project Astra

A **multimodal AI** agent capable of processing text, speech, images, and videos. It uses visual memory to identify objects and remember locations, enhancing its ability to assist users in real-time.

- **Multimodal Processing** – Handles text, speech, images, and videos for a richer AI experience.
- **Visual Memory** – Identifies objects through a camera and remembers locations for better contextual understanding.
- **Human-Like Interaction** – Combines visual and verbal inputs for more natural and dynamic conversations.
- **Real-Time Assistance** – Helps users by answering questions, retrieving information, and identifying objects on the go.

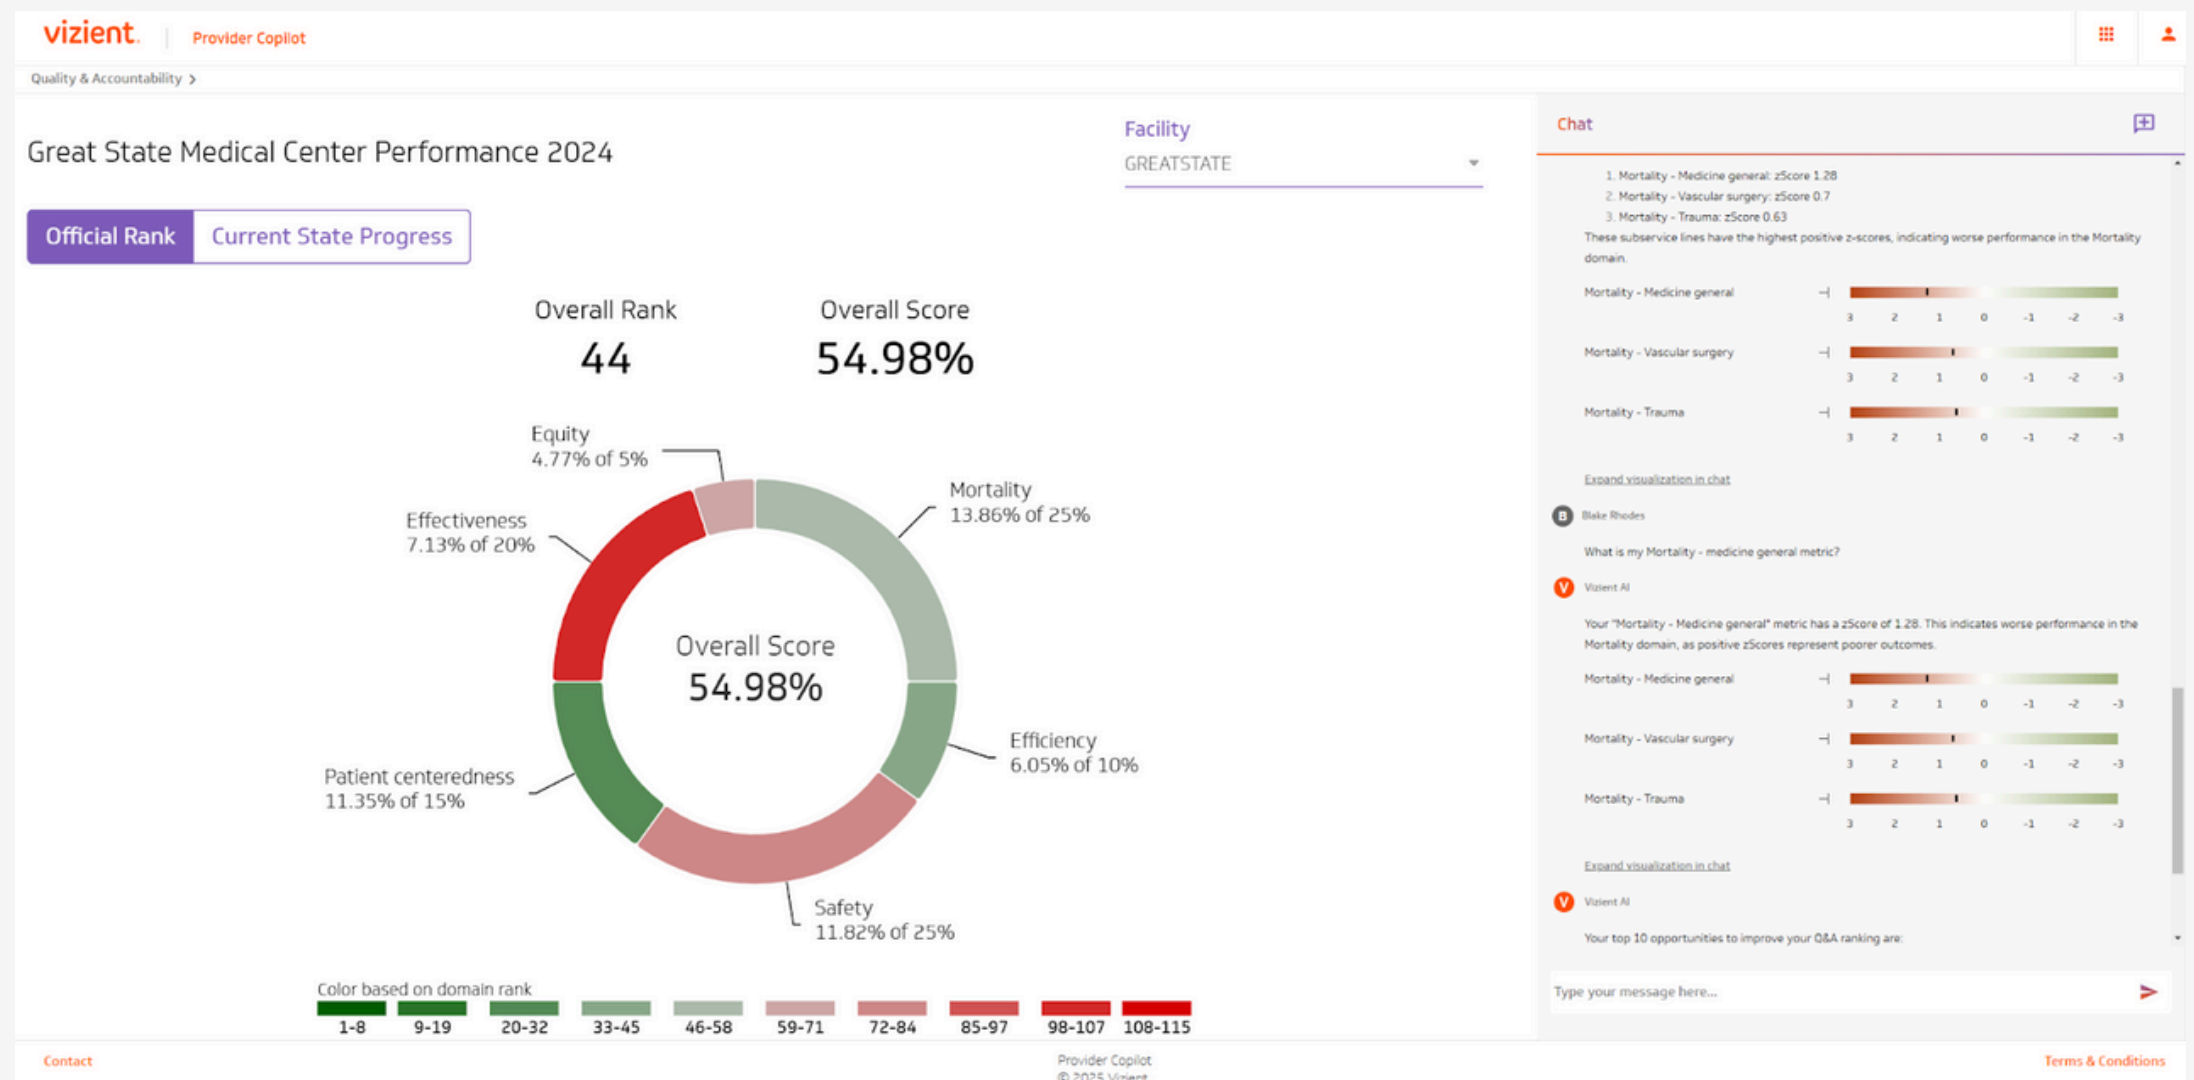

4. Vizient

Vizient, a leader in healthcare performance improvement, is transforming how hospitals and clinics analyze data.

✓ LangGraph for Orchestration – With LangGraph, they implemented a structured hierarchy where worker agents report to a supervisor agent, ensuring seamless coordination and higher reliability.

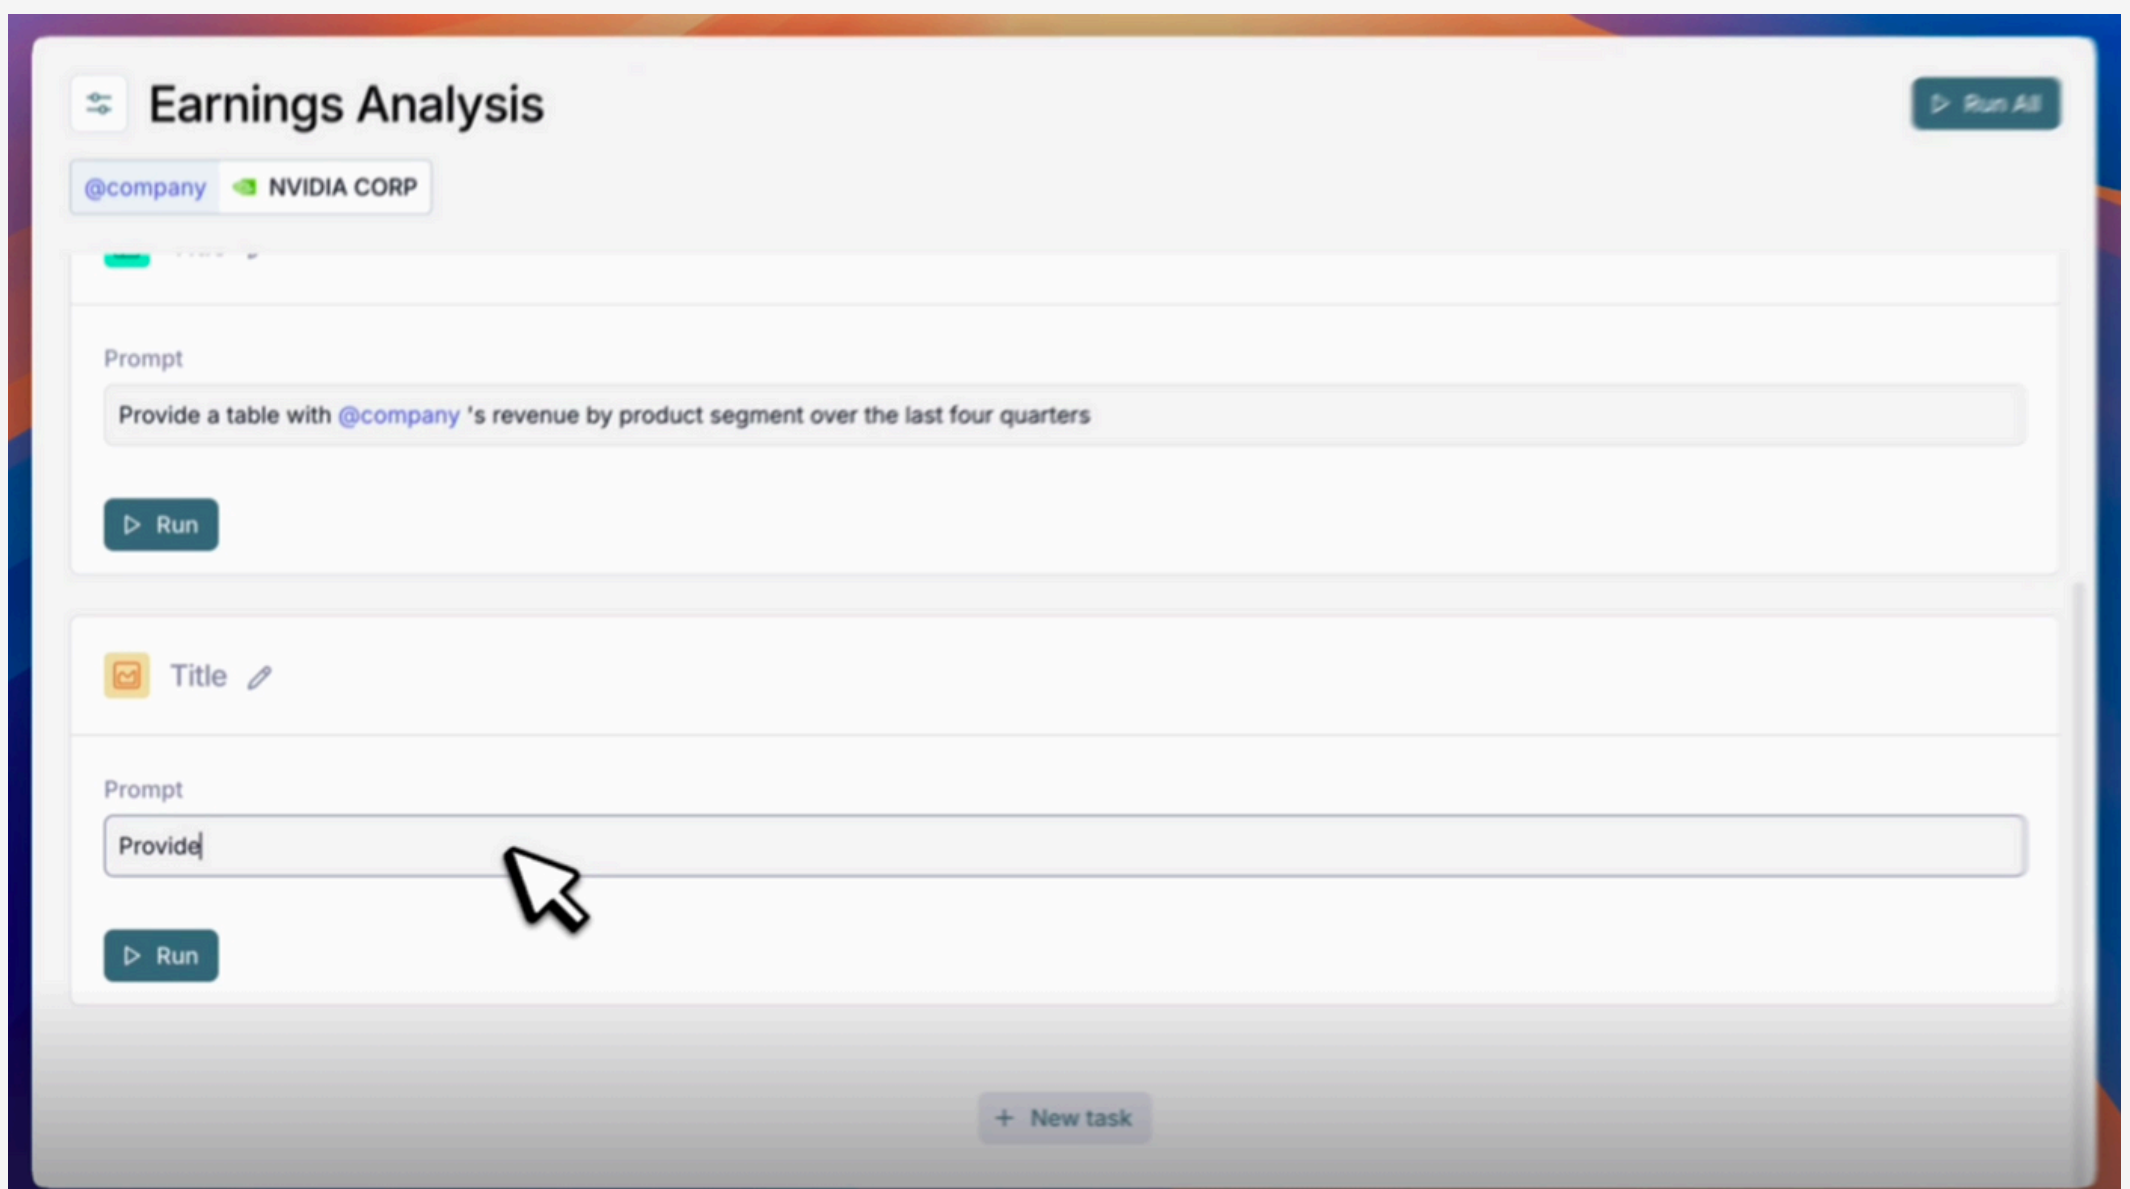

✓ LangSmith for Observability & Prompt Management – Vizient uses LangSmith's tracing capabilities to debug real-time issues and optimize responses.

5. Captide

Captide leverages **LangGraph** and **LangSmith** to build agentic workflows that streamline financial research.

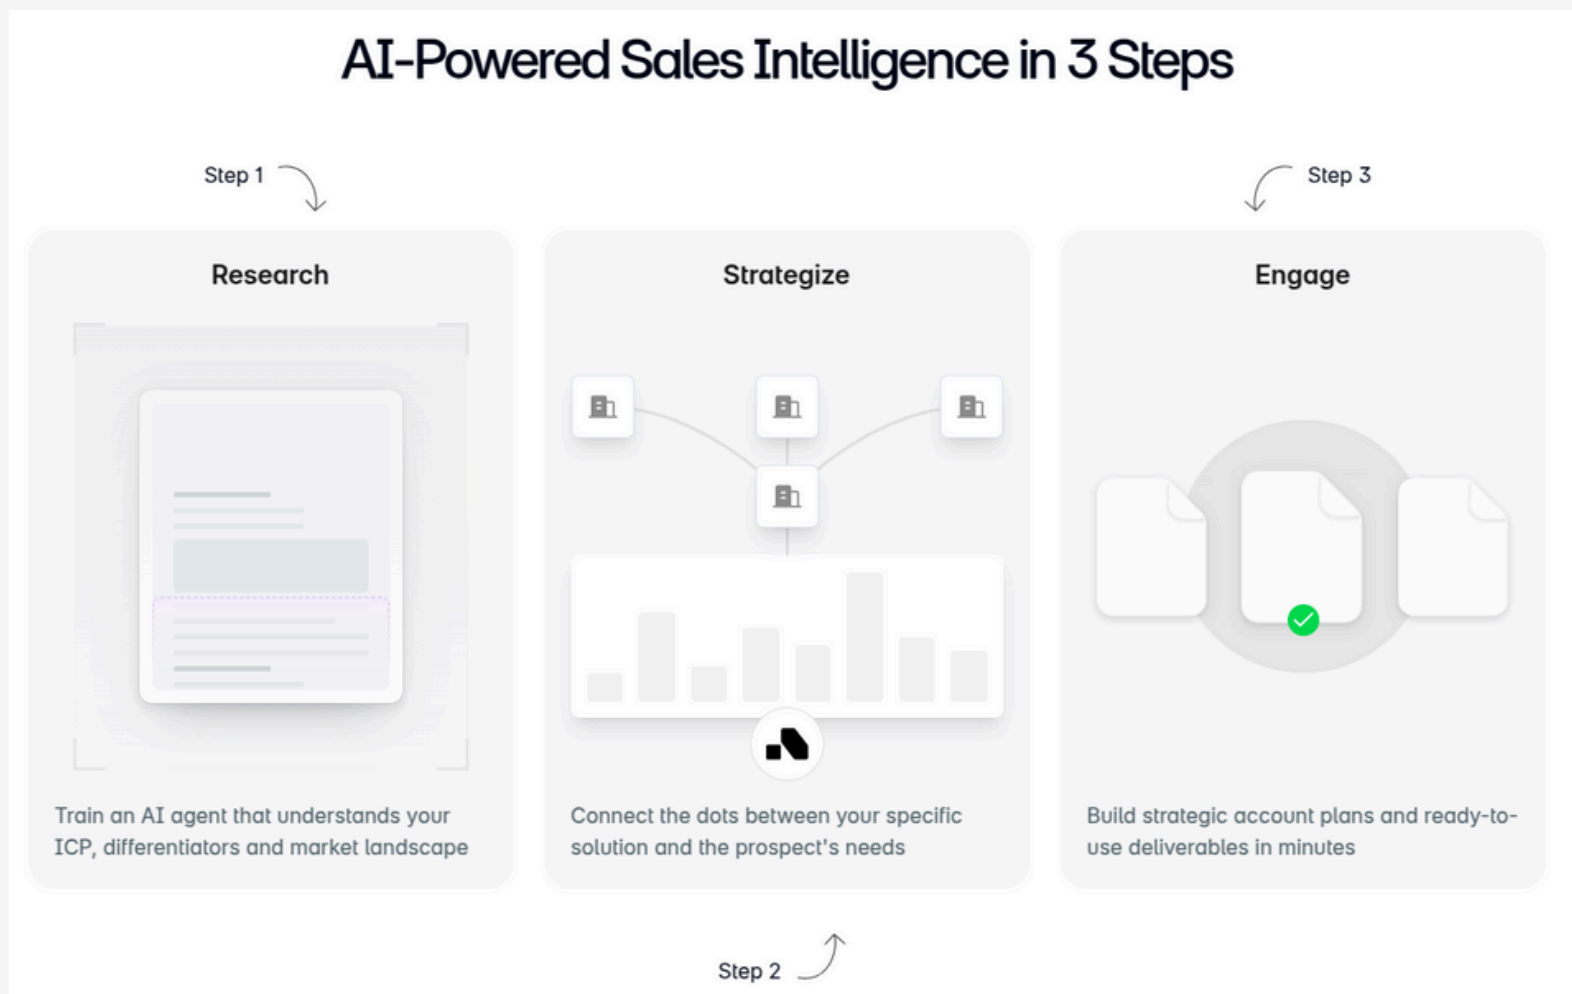

Using natural language processing (NLP), analysts can request complex data extractions in plain English, and Captide's agents handle retrieval, processing, and structuring of vast document sets.

- Parallel Processing with **LangGraph**
- Structured Outputs: With **LangGraph's Trustcall** Python library, Captide ensures that extracted metrics adhere to predefined JSON schemas
- Real-Time Monitoring with **LangSmith**

6. Aomni

Aomni is an AI agent designed to revolutionize B2B sales and research by automating key processes like account planning and prospect discovery.

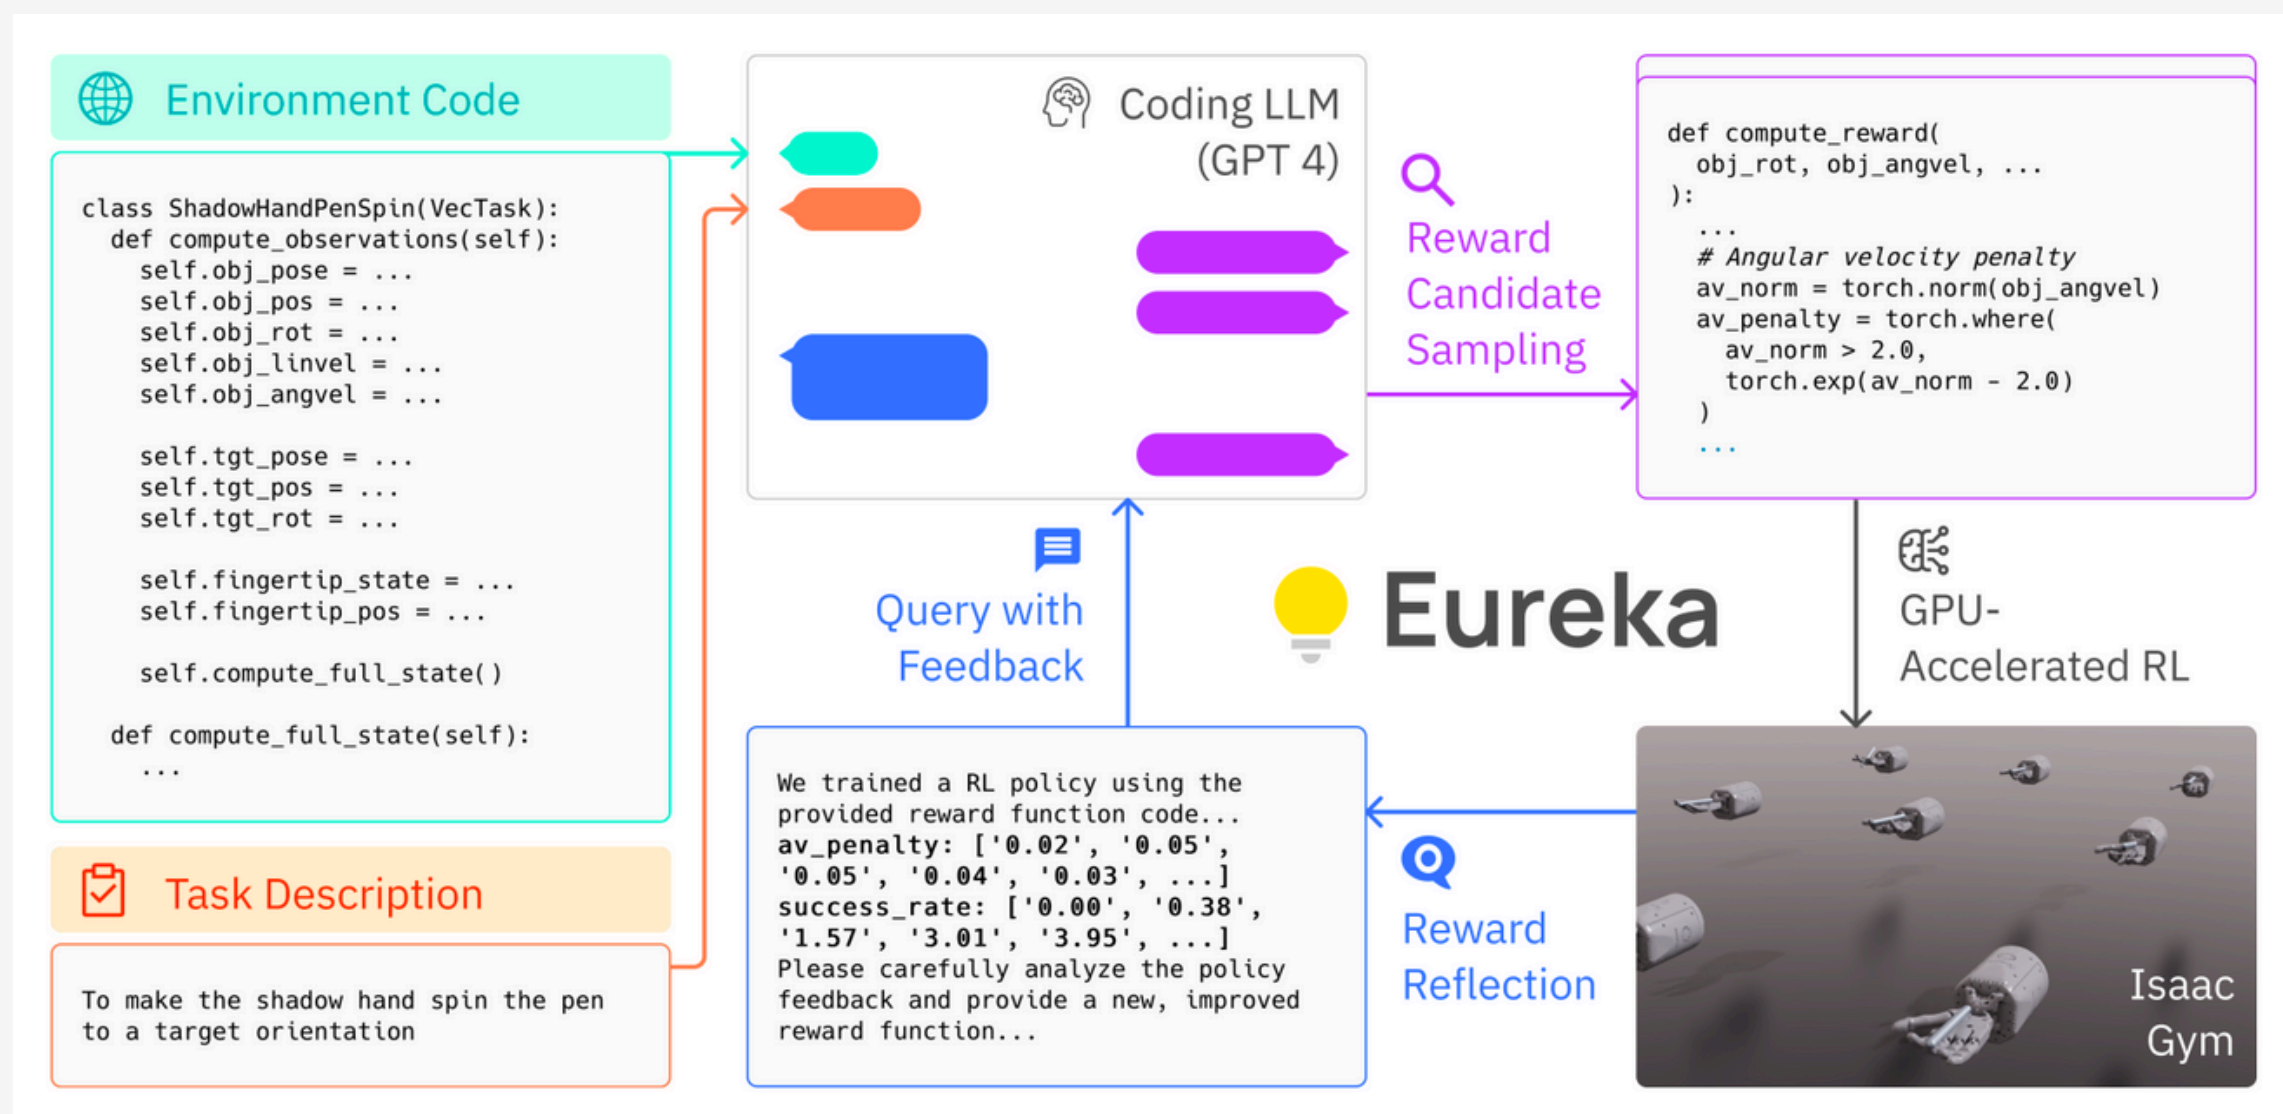

- **Automates Sales Research & Account Planning**
 - Conducts in-depth web research to identify potential customers.
 - Develops Ideal Customer Profiles (ICPs) for targeted outreach.
 - Generates strategic account plans to optimize sales efforts.
- **Trains a Custom AI Agent on Company Data**
 - Learns about your product, market, goals to create personalized sales strategies.
 - Analyzes target companies' challenges, aligns them with your solutions.
 - Generates outreach plans to improve efficiency and precision.
- **Enhances Sales Workflows & Engagement**
 - Saves time by automating prospect research and strategy creation.
 - Ensures scalability, making it suitable for both startups and enterprises.

7. NVIDIA's Eureka Agent

Powered by GPT-4, **Eureka** automates reinforcement learning by writing optimized reward programs, outperforming human-designed ones in 80% of tasks, leading to a 50% performance boost.

Using **NVIDIA Isaac Gym**, a GPU-accelerated physics simulation platform, Eureka iteratively refines its reward functions, enabling self-improvement.

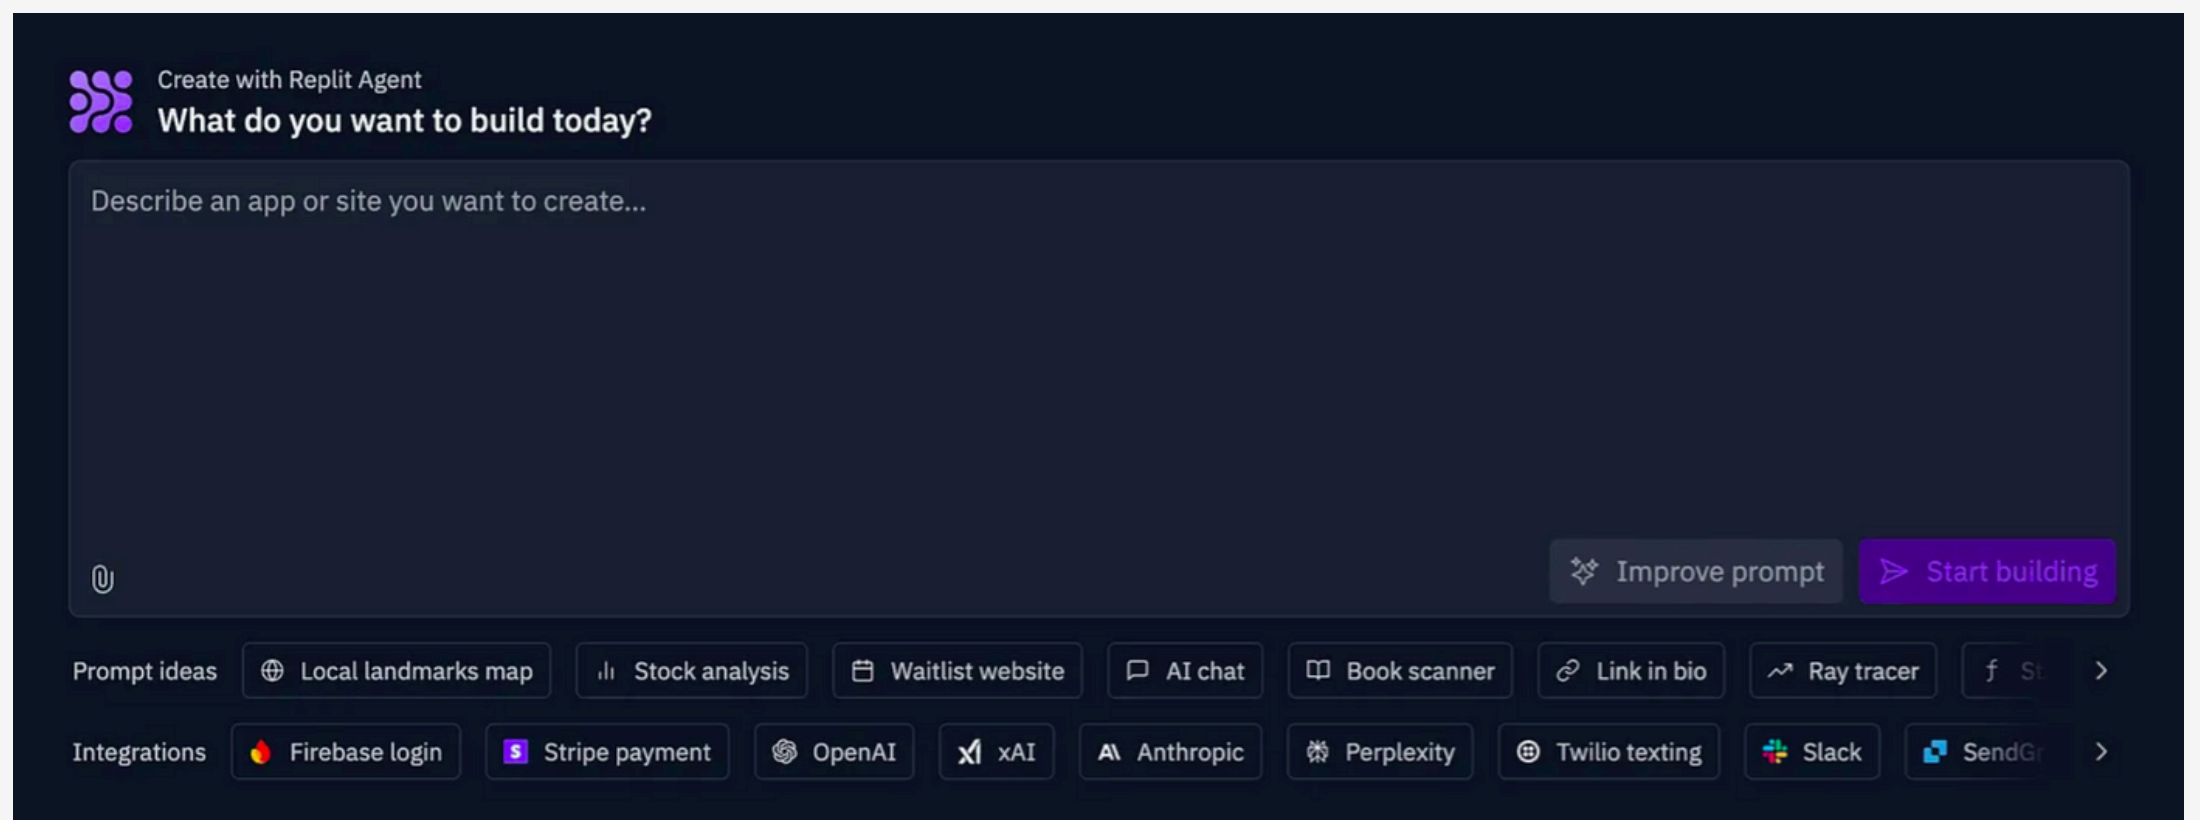

8. Replit Agent

Replit Agent is an AI tool that helps users build software through natural language prompts. It simplifies development by handling prototyping, debugging, and UI creation.

Key Features:

- ✓ AI-Assisted Development – Automates coding tasks and suggestions.
- ✓ Interactive Assistance – Users can refine prompts and iterate on AI-generated plans.
- ✓ Web & Mobile Support – Available on desktop and Replit's mobile app.

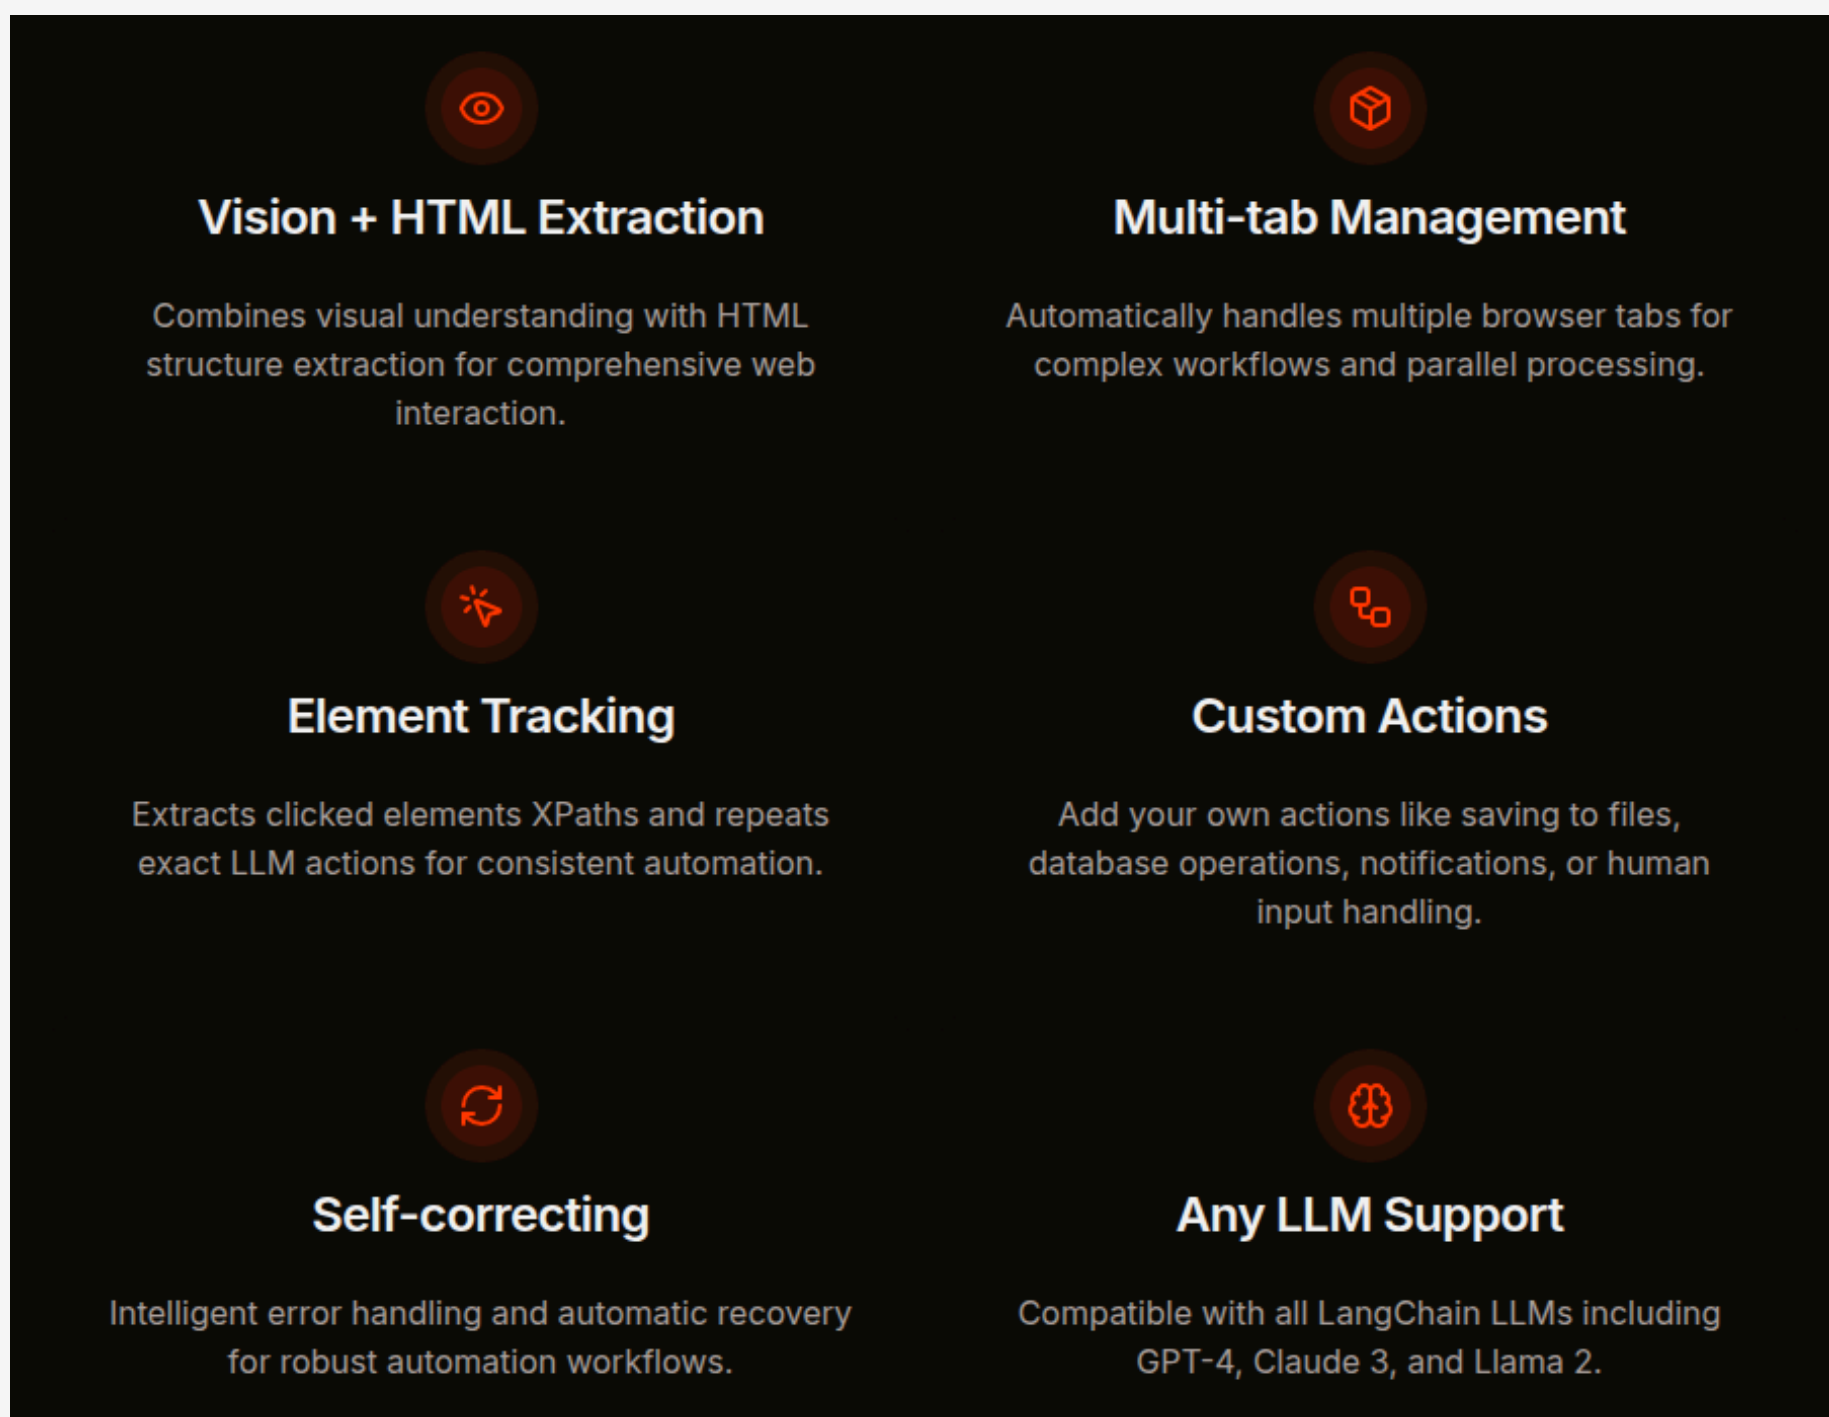

9. Browser Use

Browser-use is the easiest way to **connect your AI agents with the browser**.

Browser Use lets you run agents on the browser to be your online personalty -

You can

1. Write Google Docs
2. Fill Job Applications
3. Do flight bookings etc.

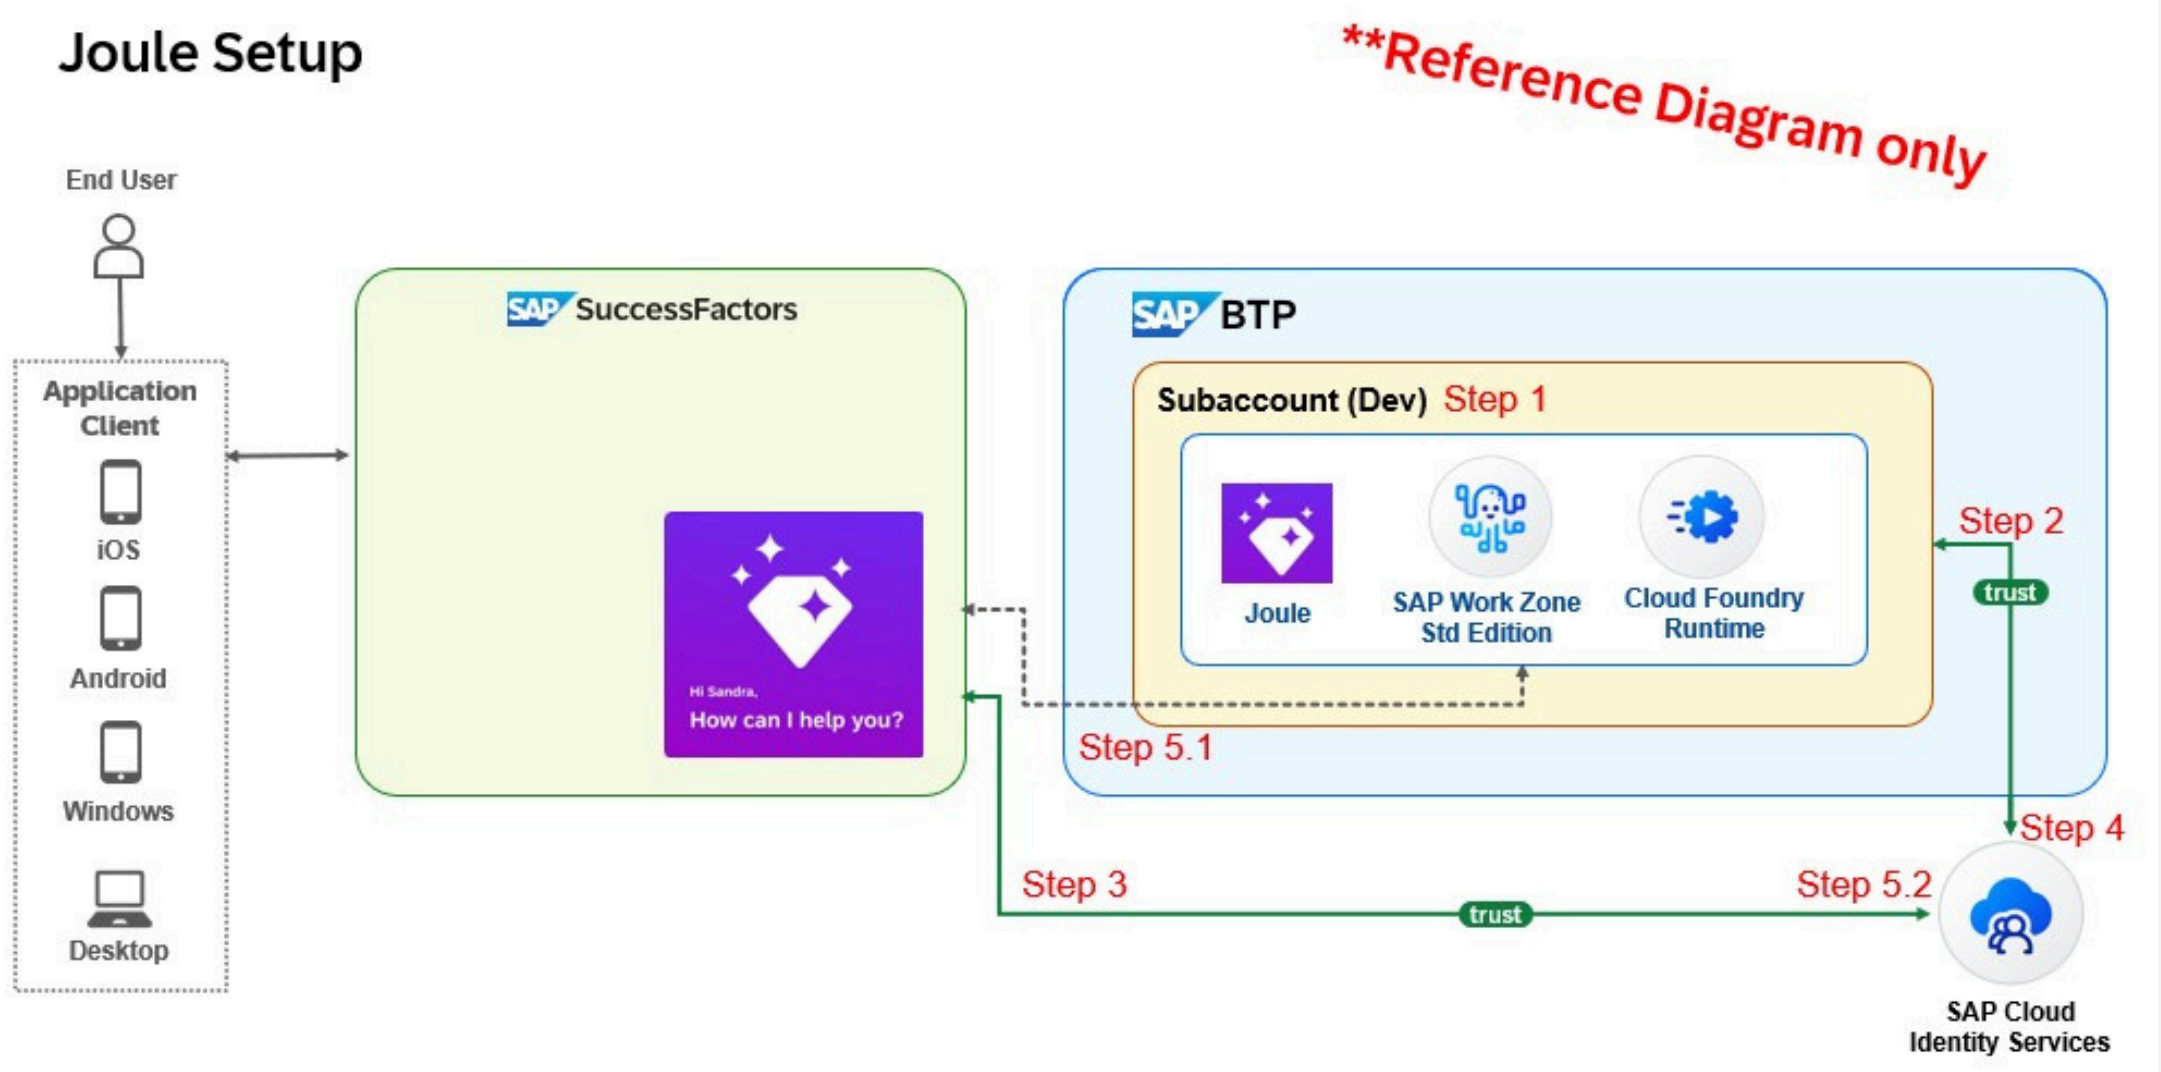

10. SAP's Agent - Joule

Joule's collaborative AI agents go beyond basic automation by working together across different business functions. They can:

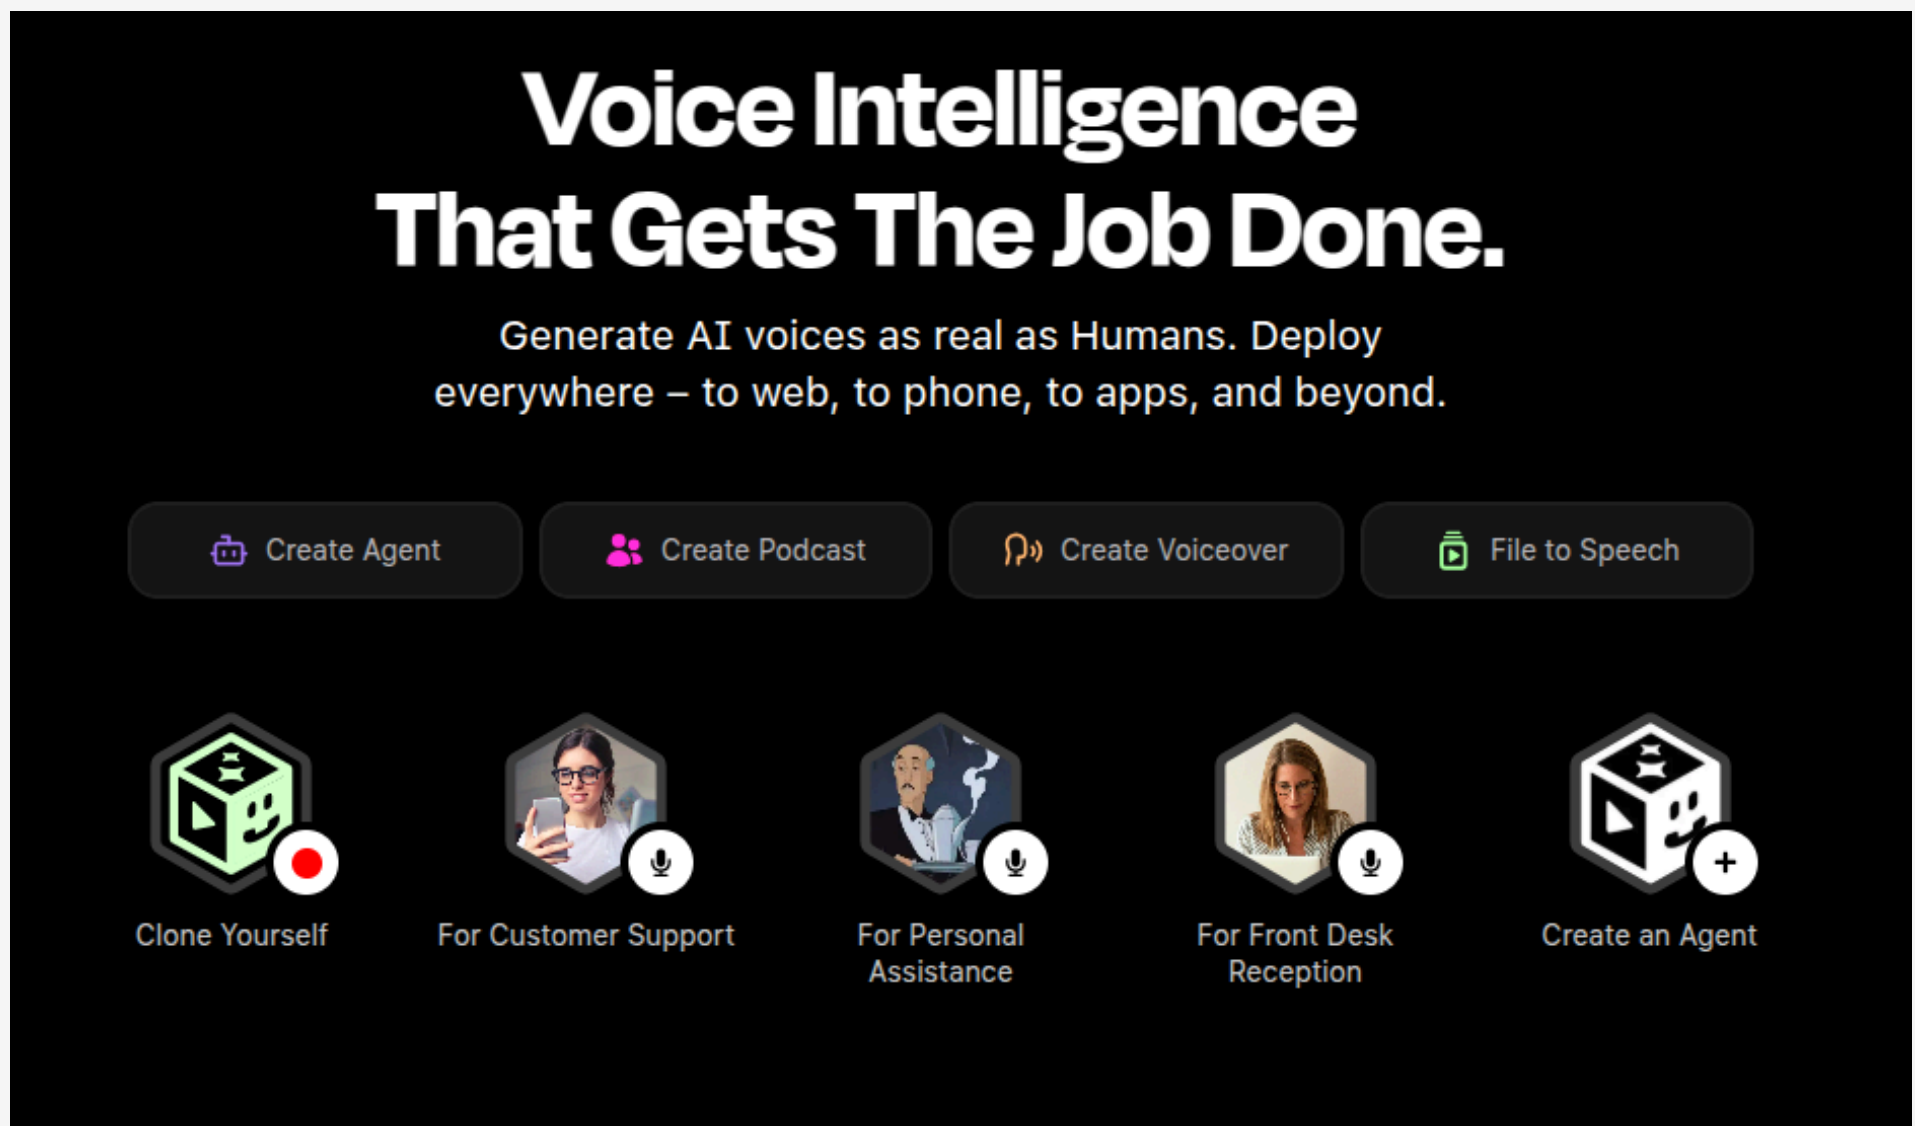

- Reason, Plan, and Execute Tasks Collectively
- Automate Multi-Step Business Processes
- Break Down Organizational Silos
- Leverage Business Context with SAP Knowledge Graph
- Enable Cross-Functional Collaboration
- Improve Efficiency with Extensibility

Joule Setup

11. Play.ai

Play.ai allows users to build capable AI Voice Agents using a novel approach based on a single **Large Dialogue Model (LDM)**.

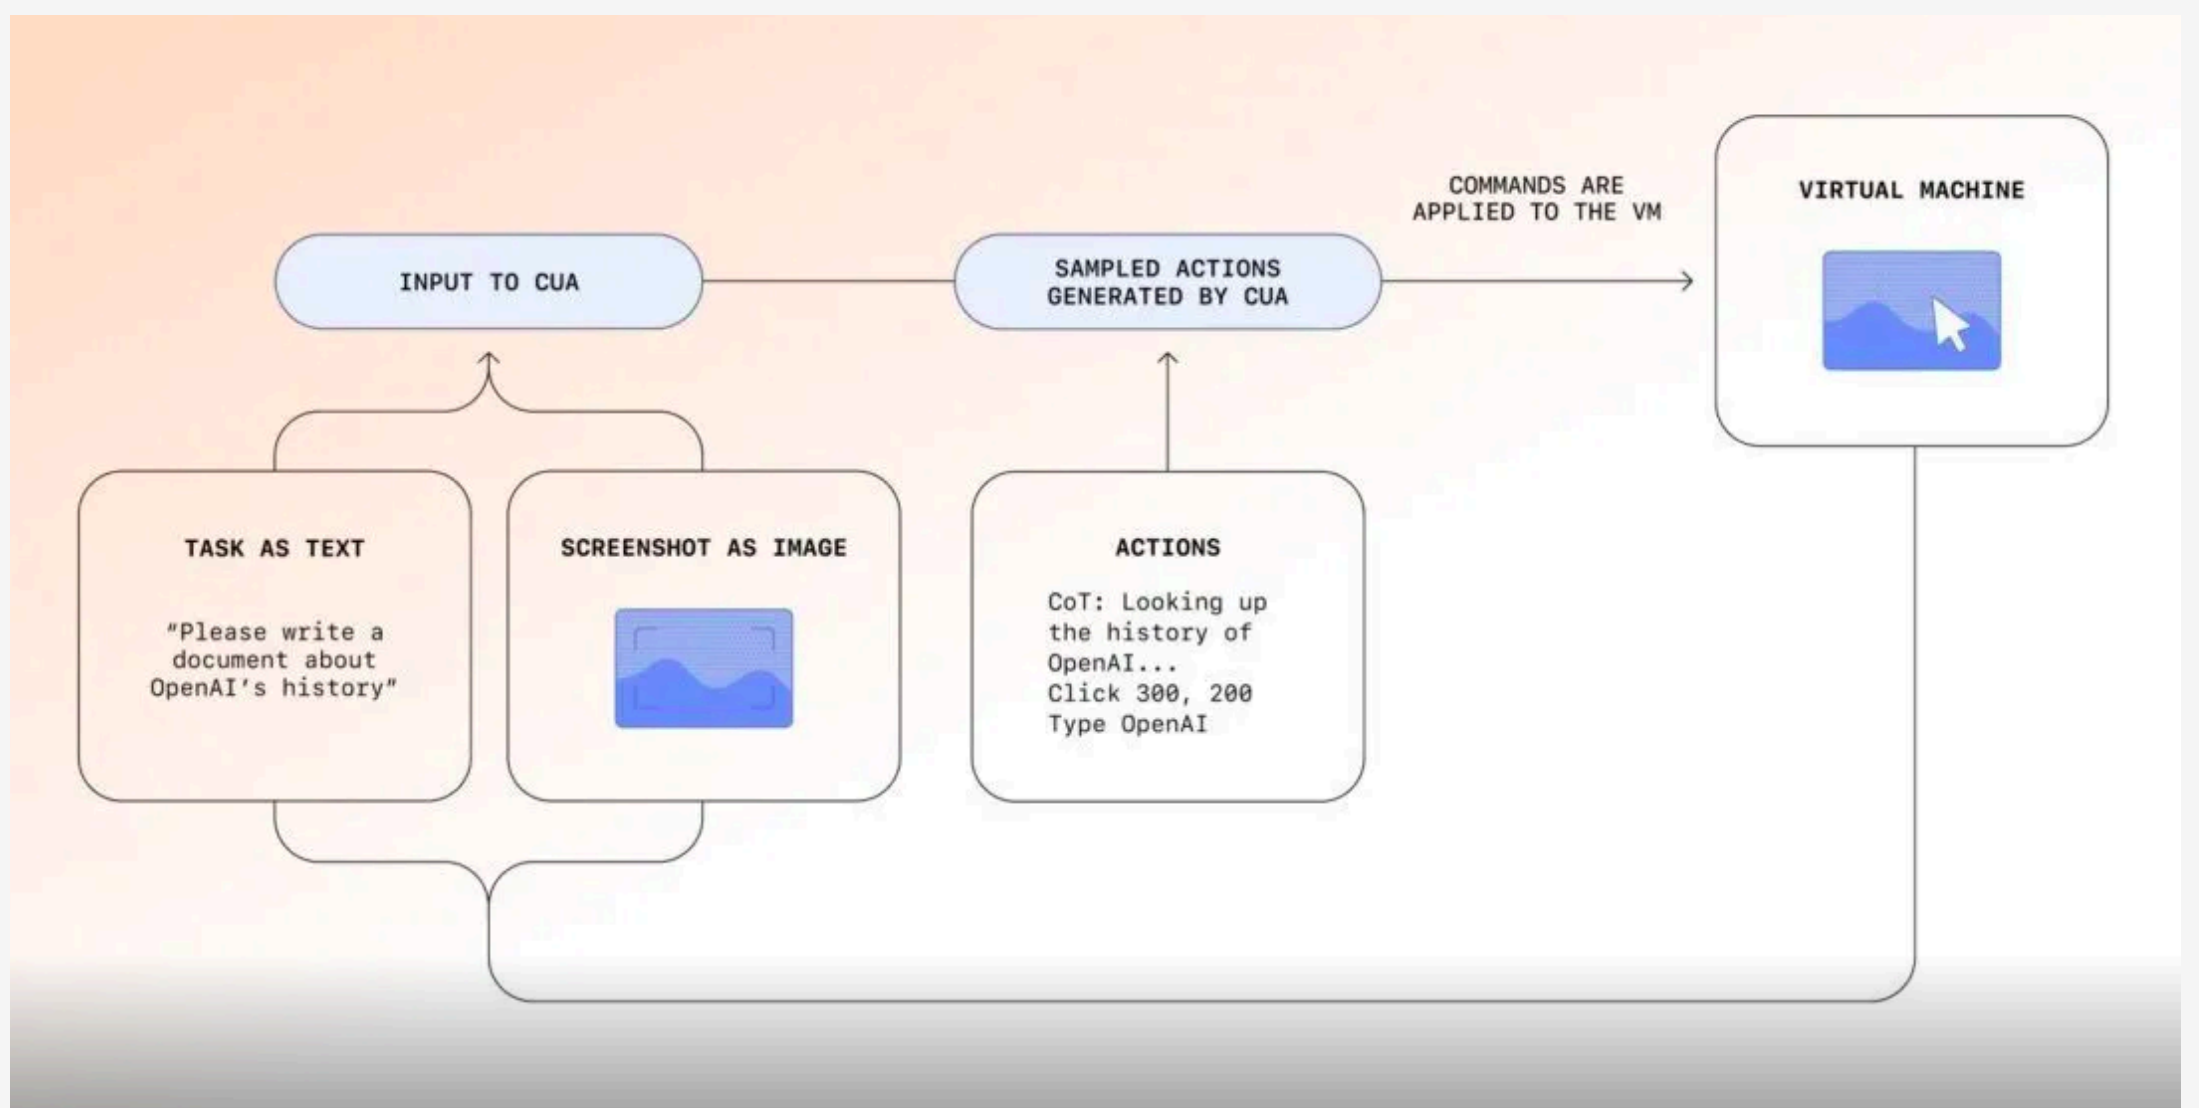

Play AI is used in various applications, including:

- **Sales and Customer Support:** It enables businesses to scale operations with cloned voices for full conversations or automated messages, providing 24/7 customer service.
- **Gaming:** It powers AI characters with expressive conversational voices.
- **Content Creation:** It is ideal for creating AI podcasts, audiobooks, and customized entertainment content.
- **Business Automation:** It helps create AI virtual receptionists and humanlike IVR systems for efficient call management

12. Operator by OpenAI

OpenAI's Operator can automate repetitive browser tasks like filling out forms, ordering groceries, scheduling appointments, and navigating websites using clicks and typing.

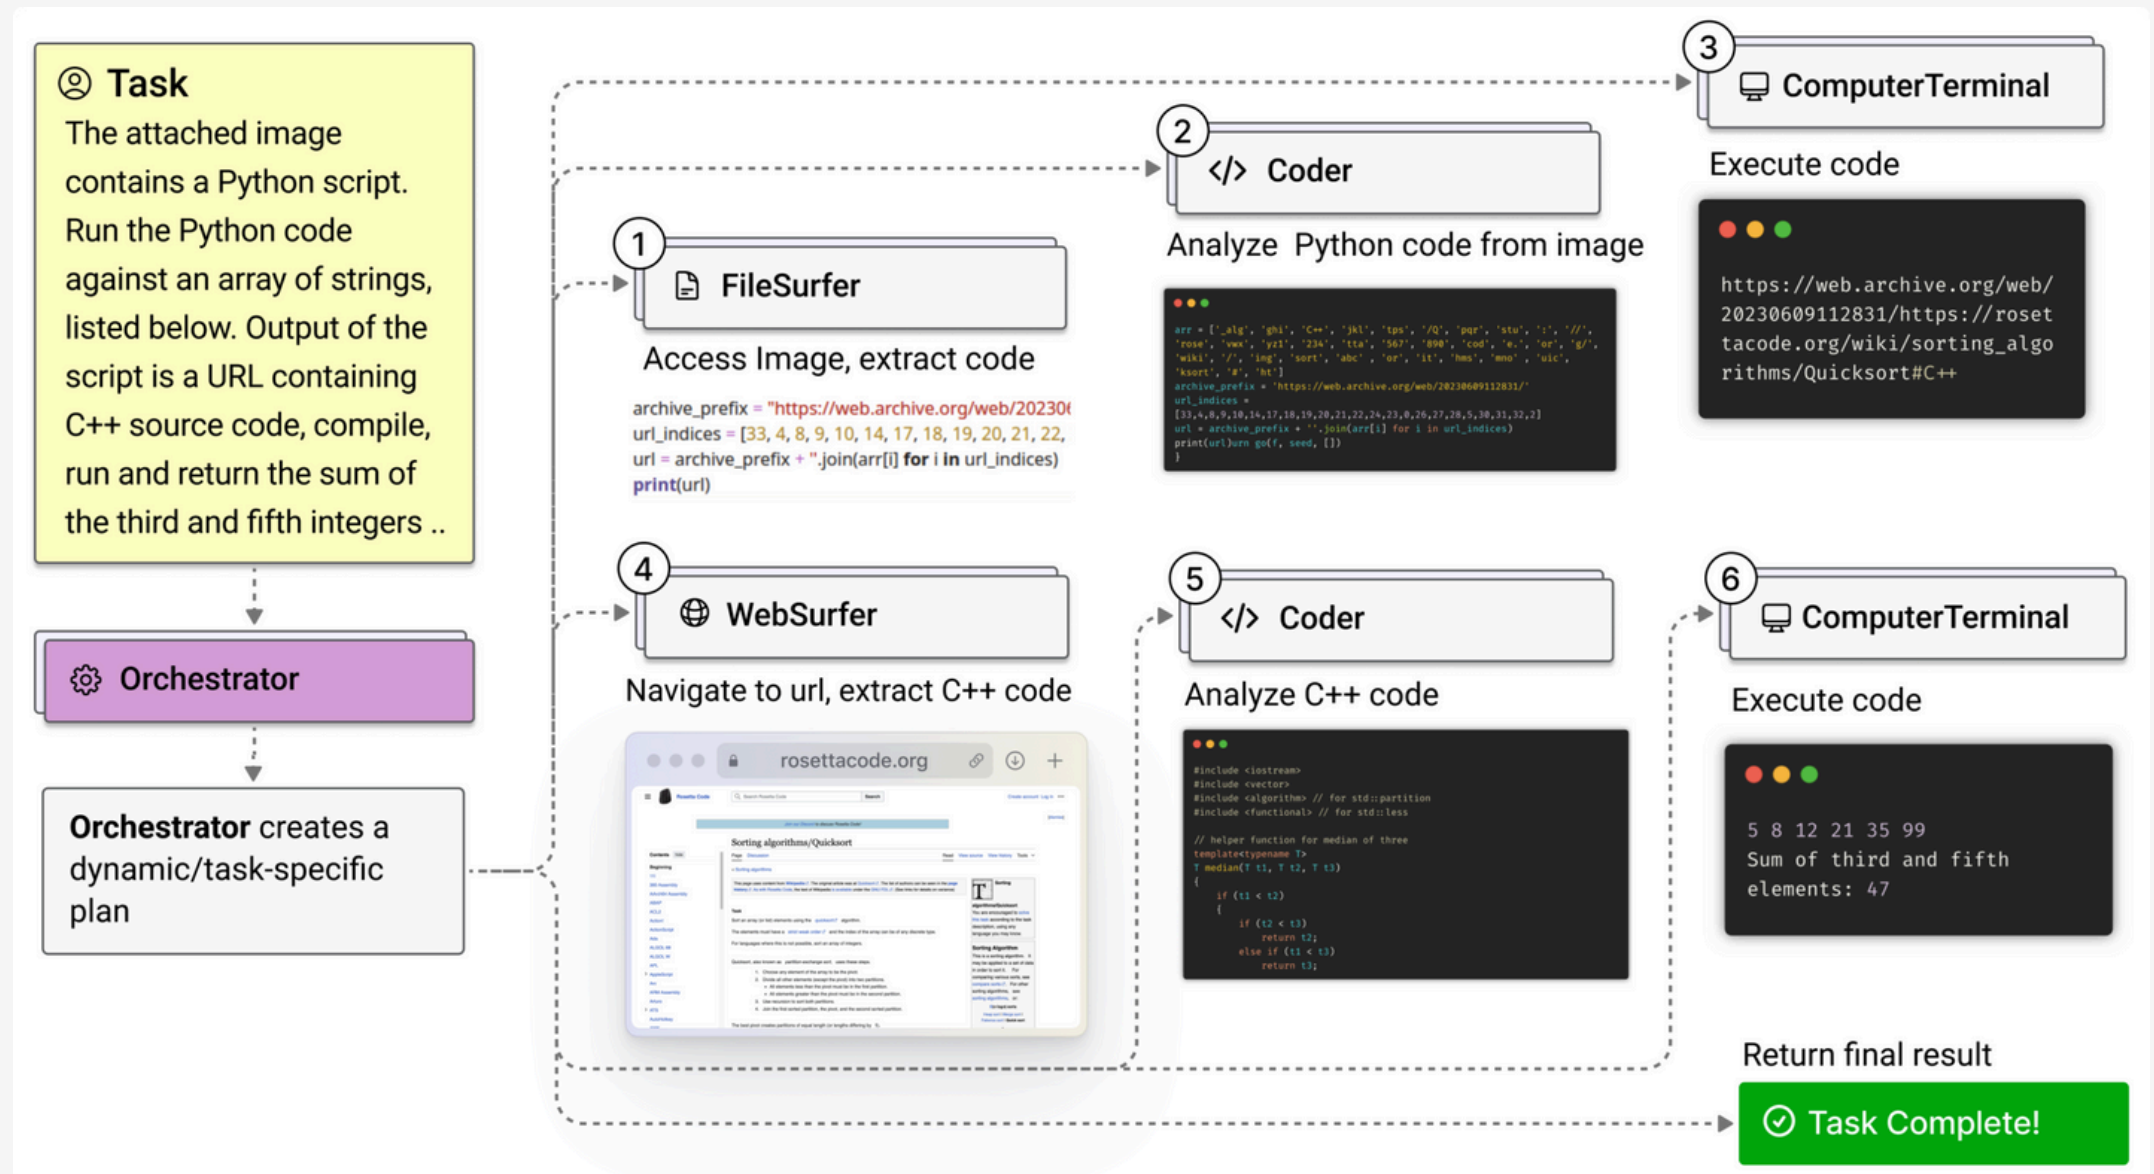

*Computer Using Agent

CUA achieved state-of-the-art results,

38.1% success rate on **OSWorld**,
58.1% on **WebArena**,
and **87%** on **WebVoyager**

13. Magentic One

Magentic One is built on Microsoft's open-source **AutoGen** framework, allowing it to integrate with various large language models (LLMs) and tools.

Key Features of Magnetic-One AI:

- **Multi-Agent Architecture:** The system is centered around an "**Orchestrator**" agent that coordinates four specialized agents:
 - **WebSurfer:** Handles web navigation tasks.
 - **FileSurfer:** Manages file operations.
 - **Coder:** Executes coding tasks.
 - **ComputerTerminal:** Performs command-line operations.
- **Task Automation:** Magnetic-One can automate a wide range of tasks, including booking tickets, purchasing products online, editing documents, and executing Python code.

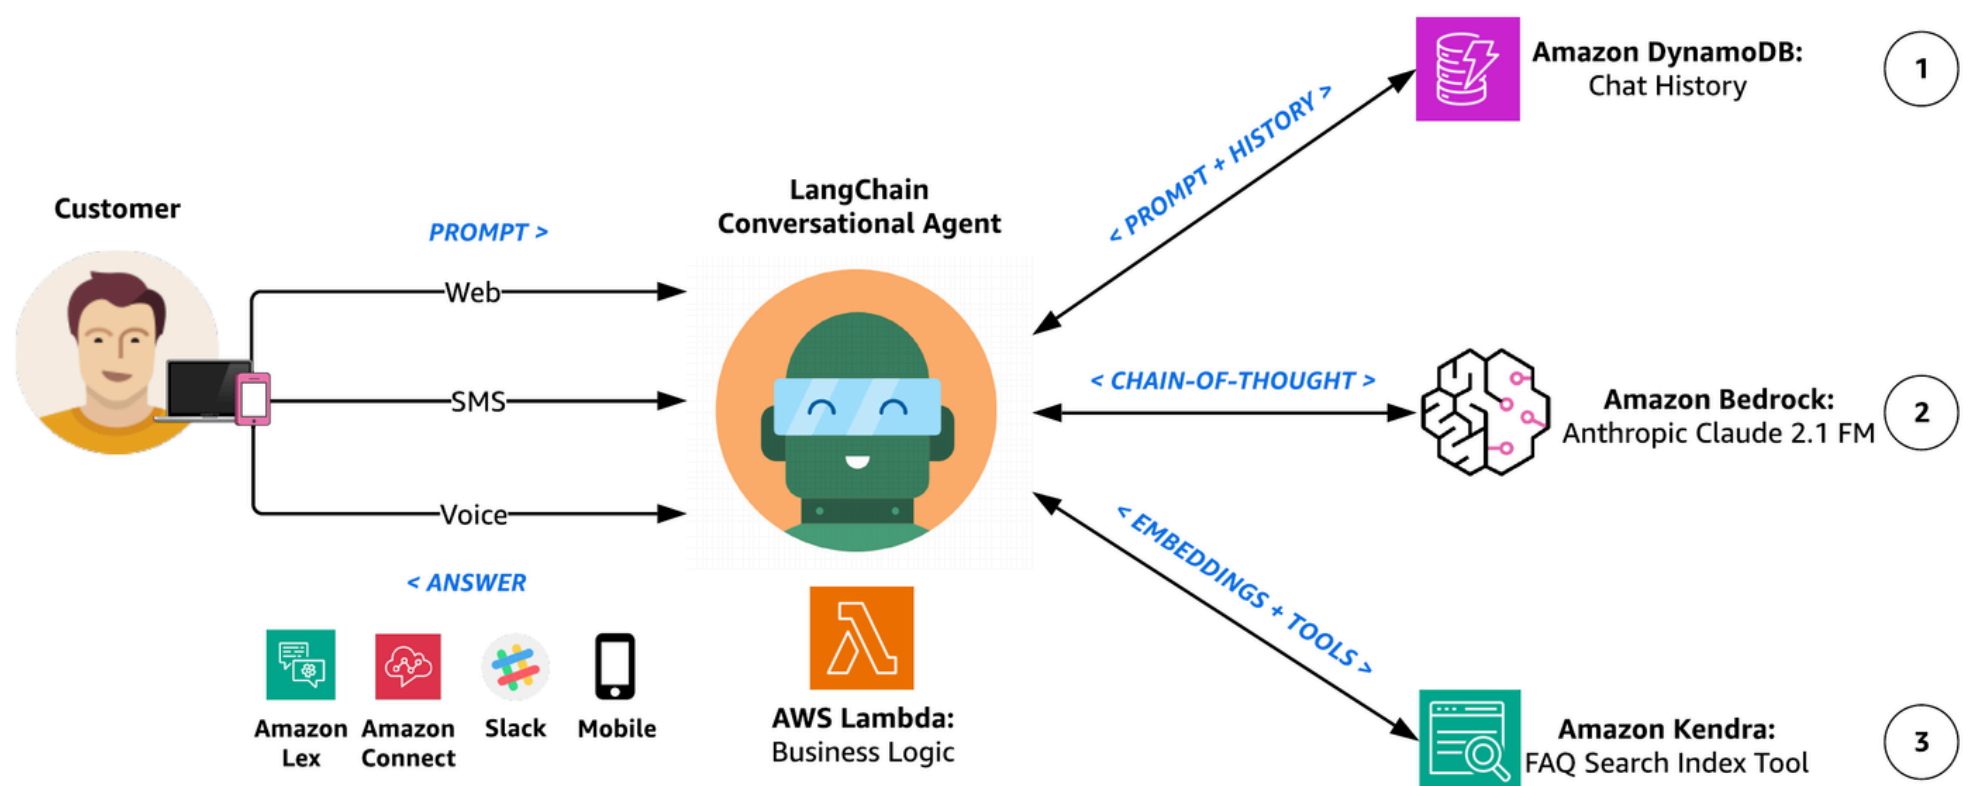

14. Synthflow

Synthflow AI is a platform for creating customizable AI voice assistants.

It offers a no-code interface for automating phone interactions, supporting over 20 languages and integrating with various tools.

Features:

1. No-code Interface
2. 20+ Language Support
3. Advanced Workflow Optimization

**Sample Conversational AI Agent
built using AWS technologies**

15. Waynabox

Waynabox offers surprise trips where travelers learn their destination just two days before departure. To enhance the experience, they teamed up with CrewAI to provide real-time, personalized itineraries.

CrewAI's AI agents:

- Find top activities, restaurants, and tours.
- Adjust plans based on weather and traveler preferences.
- Deliver itineraries instantly via WhatsApp.

SET UP YOUR TRIP

Choose the surprise trip that best suits you. Select the number of travelers, the airport of departure and the dates of your getaway.

REMOVE DESTINATIONS

You will discover the possible destinations and you'll be able to discard the cities you do not want to visit.

SURPRISE!

You will not know your destination until a few days before traveling!
